

How to use SEEK by iNaturalist

1. Download the Seek app, available for both iOS and Android. Seek does not collect or store any data, making this app safe for children. • If you are in the UK and older than 13 you may also want to set up an account in iNaturalist, and link this to your Seek account.
2. Head outside and start exploring nature!
3. Point the Seek camera at any organism and Seek will try to identify it. Seek works best for things that are commonly seen and easy to photograph such as many plants, insects, and fungi.
4. You can complete monthly challenges to earn badges. Each challenge will ask you to find certain species from a single or several groups of organisms. For instance, a challenge might ask you to find “5 mammals” or “2 butterflies + 2 spiders + 2 flowering plants.”
5. A new challenge is announced each month, but you can also complete past challenges. Have fun and enjoy increasing your species knowledge as you complete them!
6. Use the Species Nearby feature to see what is commonly found near you. Click on any species to learn more, including whether it is native to your area or where you are likely to find it.
7. As well as using your smart device, always consider using field guides, sketching and hands-on exploration too!
